

Triana Science & Technology participated with ESA (European Space Agency) in the logistic of the new protein crystallization experiment under micro-gravity which was carry out in the FOTON M3 Spacecraft. This mission was planned to be launched in September 2007.

Triana Science & Technology also has participated with JAXA (Japanese Aerospace Exploration Agency) in the logistic of 6 missions at the ISS (International Space Station) for protein crystallization experiments using the Granada Crystallization Facility (GCF) and the Granada Crystallization Box (GCB).

Video of how we developed some crystallization space experiments:
